(TO EMAIL PARTICIPANTS)

**Re: Cooper Lake Hydroelectric Project (FERC No. 2170):  
Updated Mailing List and Communications Protocol**

Dear Cooper Lake Project Relicensing Participants:

In response to comments and requests from relicensing participants in May, Chugach has updated its relicensing communications protocol and participants list, as follows:

- The communications protocol has been updated to reflect current progress and status of the relicensing effort, and to reflect participants' request to streamline distribution (and reduce paper mailings) of relicensing documents and other communications. This update has been accomplished at the request of participants and in accordance with provisions of the communications protocol.
- Based on input from participants in response to our May 2003 request for current information, the participants/ mailing list has been updated. In addition, participants' preference for receiving relicensing communications (e.g., email only, paper copies only, or through distribution to a single contact within their particular organization) has been noted and will be followed for all future communications, in accordance with the updated communications protocol.

The updated communications protocol and participants list are enclosed/attached with this letter.

As always, if you have any questions or concerns, please do not hesitate to let us know. Relicensing-related communications may be directed to [relicensing@chugachelectric.com](mailto:relicensing@chugachelectric.com).

Sincerely,

Burke Wick, PE  
Plant O&M Supervisor  
Cooper Lake Relicensing Project Manager
