Occupation: Mechanical Engineer
Employer: Self-employed
Education: B.S. Mechanical Engineering, minor in Mathematics, Texas Tech University; Saint Pius X High School
Nominated by: Nominating Committee
Incumbent: No
Declarations: None

Candidate Statement

As an engineer and business owner, I always look for ways to improve efficiency through process or technology, sometimes through both. Each must support the other with clear assumptions and a roadmap in order to identify and overcome constraints. In Alaska and at Chugach, we are on the cusp of moving into an energy future that will bring generational prosperity for the state and the nation but we are constrained by self-imposed limitations.

To become a leader in manufacturing, defense, and data we need to look at every opportunity that brings long-term security for ratepayers. We need to eliminate distractions like decarbonization, focus on a diverse and reliable portfolio, and rigorously evaluate investment in generation and transmission that are secure.

Key Energy Priorities:

1. Reliable – Stable grid infrastructure keeps the power on when we need it most
2. Affordable – Economy of scale and system design enable diversification
3. Secure – Local and diverse mitigates risk to ratepayers

I intend to look towards the future and advocate for services and policies that are truly beneficial to the members and enable economic growth.
