Corporation and  
ConocoPhillips  
Education: B.S. Electrical  
Engineering, University  
of Kansas  
Nominated by: Nominating Committee  
Incumbent: No  
Declarations: None

#### Candidate Statement

I am running for the CEA Board to guide CEA to a higher level of household/business service. CEA currently provides reliable and cost-effective electrical supply, due to the capabilities of its employees and Board. As an electrical engineer and with 42 years of oil & gas industry experience; I believe that I can assist CEA to serve their members even better.

I can contribute to CEA as it navigates through a number of possible challenges, including:

1. Improving cost structure, to alleviate the high cost of doing business in Alaska and striving to contain or reduce the cost of our electricity
2. Ensuring reliable and cost-competitive natural gas supply for power generation
3. Developing renewable generation and energy storage opportunities that are truly environmentally-friendly and that make economic sense
4. Ensuring that the expected CEA/ML&P acquisition synergies are attained or exceeded
5. Improving Railbelt intertie reliability and efficiency
6. Developing new industrial, commercial, and residential loads, to better distribute fixed costs

If elected, I will assist CEA in delivering the highest level of cost-effective and reliable service to their members. Thank you.
